

**Implementation Report of Dissemination
of Generic Modules on Population, Reproductive Health, and Gender
Developed by Partners in Population and Development (PPD)
to Provincial BKKBN Training Centers,
23 February 2009.**

The International Training and Collaboration Center, BKKBN has asked by Partners in Population and Development to disseminate Generic Modules on Population, Reproductive Health, and Gender Developed by PPD to the staffs of the BKKBN training center both in central and provincial level. The purpose of this dissemination is to share among the participants the content of the module and the willingness of them to utilize or integrate the module in their training activity.

The dissemination was done in 23 February 2009 and attended by 35 participants representing six BKKBN Provincial Training centers and 2 training divisions of BKKBN central office. The participants comprise of head of the BKKBN provincial training center and trainers from BKKBN central office and provincial office.

Some burning issues during the discussion as follows:

1. Contents and length of training

The contents of module are substantial but too broad. Also the length of training is not applicable because is too long. Typically, the duration of training is in between 5 – 7 days.

2. The book references are instrumental but take time to obtain or to access. As core or main reference, participants suggest PPD to materialize the references and send to country members of PPD particularly to Indonesia/BKKBN.

3. The generic module is too theoretical. Particularly of Gender issue, participants are eager to insert into the curriculum since that Indonesia is a country with Muslims as the majority is successfully mainstreaming gender issues into the development including family planning. Even Indonesia put gender development by establishing state ministry of women empowerment.

At the end of the meeting, BKKBN provincial Training centers agreed to follow up the following activities:

1. Disseminate generic modules to relevant stakeholders in their respective provinces,
2. Establish working team of Trainers
3. Develop specific training based on the generic modules as piloting. BKKBN Training Centers will also insert the module partially into their trainings

4. Advocate local government to allocate budget to support the training

Prior of the dissemination, PULIN has translated generic modules from English to Indonesian version.

To meet the efficiency and effectiveness of training, participants will modify the training by combining of four modules into one of training package. It means that in designing the training, we will develop a curriculum which consists of four modules into one of training package by selecting important parts in each module. In designing the training package will consider the need of capacity building and the capability of local government.
